

Easy to Use, Flexible, **Integrated** Electronic Medical Records Solution.

Whether you're a large physician association or a single provider practice, Visionary understands the challenges you face in selecting an electronic medical record system that fulfills the needs of your entire organization. You need Visionary DREAM EHR designed with the physician's workflow in mind. DREAM strikes a balance between technology and human interaction giving the end user an intuitive, easy-to-use, secure system with wide-scale physician and non-physician acceptance.

Visionary is unique in its customization and flexibility capabilities, delivering necessary clinical data to simplify the complexities of point-of-care decisions. Visionary DREAM EHR mirrors the workflow habits for each level of clinical user and actually adapts to every clinical style. This allows the clinician to select everything from the order of a question to the word choice and phrasing of the notes.

Visionary DREAM EHR represents the next step in the evolution of electronic medical records software. While practice management systems are capable of increasing overall productivity and improving bottom line cash flow, the integration of DREAM EHR expands on those benefits by further enhancing clinical workflow and minimizing paper-based redundancies.

Visionary DREAM EHR does more than just log patient information. It is designed to track the flow of your patient visits from chronicling patient histories and previous encounters to establishing new examination records via a series of provider-specific templates.

- **Eliminate Transcription Costs**
- **Document Management**
