

safe, simple, superior results

The EarPopper is designed to treat common ear problems without medication or ear tube surgery. The EarPopper is a safe and simple approach, for children and adults, for treating middle ear pressure problems such as:

- Middle ear fluid (Otitis Media with effusion)
- Eustachian Tube Dysfunction
- Hearing Loss
- Ear Pain and pressure caused by airline travel
- Ear fullness caused by colds, allergies, sinusitis

### How does the EarPopper Work?

Based on the Politzer Maneuver, the EarPopper delivers a safe, constant, regulated stream of air into the nasal cavity. During the moment of swallowing the air is diverted up the Eustachian tube clearing and ventilating the middle ear. The EarPopper relieves negative ear pressure and allows any accumulated fluids to drain.
