

Sysmex CA-500 Series Coagulation Analyzers

The CA-500 series quickly and accurately measures up to 5 coagulation parameters. It is the analyzer of choice for low to mid volume laboratories, or as a backup to larger coagulation analyzers.

Easy to Use

- Auto-dilution for low or high results
- Patient bar code reader, touch screen display and built-in printer

Economical

- Low acquisition and operating costs
- Runs up to 50 tests per hour
- Only one reaction tube per test
- Only one reagent (plus D.I. water) for rinsing

Proven Technology

- Turbidmetric and chromogenic analysis
- Excellent correlation to reference methods
- Reagent cooler

Advanced Features

- True, 5 parameter random access
- Runs STATs without interruption
- User-programmable for new or modified methods

Excellent Reliability

- Established product base with proven dependability
- Low maintenance - less than 5 minutes per day
- LIS adaptable with bidirectional communication

- True Discrete Random Access.
- Flexible Communication Options.
- High Performance Automation.
- Safety and Space Saving by Design.
- Extensive Data Management Options.
- New Technology with Economy in Mind.
- Reliable Detection Principles.

Infolab is pleased to announce our partnership with Siemens Diagnostics to offer you the Sysmex CA-500 series line of coagulation analyzers.
