# VISIONARY™ DREAM EHR

Whether you're a large physician association or a single provider practice, Visionary understands the challenges you face in selecting an electronic medical record system that fulfills the needs of your entire organization. You need Visionary DREAM EHR designed with the physician's workflow in mind. DREAM strikes a balance between technology and human interaction giving the end user an intuitive, easy-to-use, secure system with wide-scale physician and non-physician acceptance.

Visionary is unique in its customization and flexibility capabilities, delivering necessary clinical data to simplify the complexities of point-of-care decisions. Visionary DREAM EHR mirrors the workflow habits for each level of clinical user and actually adapts to every clinical style. This allows the clinician to select everything from the order of a question to the word choice and phrasing of the notes.

Visionary DREAM EHR represents the next step in the evolution of electronic medical records software. While practice management systems are capable of increasing overall productivity and improving bottom line cash flow, the integration of DREAM EHR expands on those benefits by further enhancing clinical workflow and minimizing paper-based redundancies.

Visionary DREAM EHR does more than just log patient information. It is designed to track the flow of your patient visits from chronicling patient histories and previous encounters to establishing new examination records via a series of provider-specific templates.

The screenshot displays the DREAM EHR interface for a patient named CINDI WILLIAMS. The main window is titled "SOAP Note" and is divided into several sections:

- Vital Signs:** A list of vital signs including BP (Systolic), BP (Diastolic), Temp, Pulse, BMI, and Respiration.
- Examination:** A detailed section for physical examination findings. It includes a "Patient Previous Visits" list on the left and a "General appearance" section with text describing the patient's condition. Below this, there are sections for "HEENT", "Neck", "Lymph Nodes", "Breast", "Respiratory System", "Abdomen", "Rectal examination", "Vascular / pulse", and "Extremities / skin".
- Vaccination:** A section for recording immunizations, with columns for Immunization, Date, Manufacturer, Lot Number, D-P Date, and Site.

The interface also features a menu bar at the top with options like "Subjective", "Objective", "Assessment", "Plan", "Management", "Utilities", "Links", and "Help". A toolbar below the menu bar contains icons for various functions such as "Sign In", "Inc. Chart", "Patient Chart", "Memo", "Chat", "e-Rx", "Log Off", "Lock", and "Exit".

"An EHR that works the way I do. My patient records are more complete and I am one step closer to a paperless office." - Dr.P.Phillips

## Additional Features:

### Easy to Use

- ; Document with electronic handwriting stylus pen, pre-defined or user defined templates, macros and / or voice dictation
- ; View or edit patient data from a desktop or Tablet PC
- ; Easy navigation menu is designed to increase usage speed while streamlining the data recording process

### Differential Diagnosis

- ; Easily document one or more differentials associated with diagnosis
- ; The differential diagnosis can also be used to quickly substitute a specific diagnosis for a non-billable or non-specific code

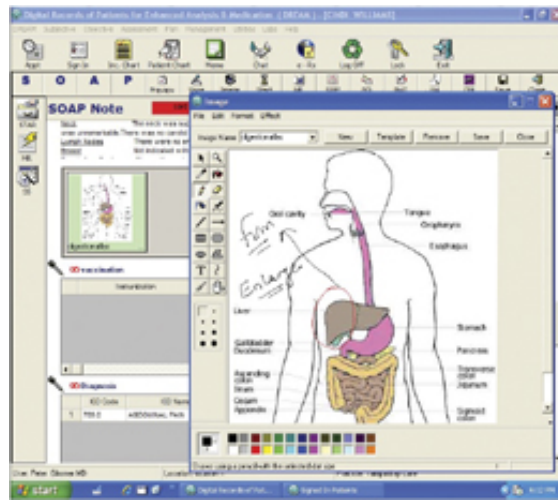

### E&M coding Assistance

- ; The automated E&M Coder calculates optimal codes. resulting in less manual coding errors and more accurate coding to justify higher practice reimbursement
- ; A complete code database consisting of all ICD-9 and CPT codes are available, plus you have the ability to add custom alternate descriptions or abbreviated descriptions

### Point-of-Care Decision Making

- ; Organize your records with swift chart access and record patient documentation at the point-of-care.
- ; One-click retrieval of patient notes, medications and vital documentation to ensure the best clinical decision

### Managing and Tracking Pending Orders

Click image

- Manage and track any pending day to day analysis, lab results, transcriptions, prescriptions and plans

### Messaging / Tasking (IOM)

- Tasks can be assigned to particular individuals, tracked and marked off when completed. Progress notes, specific documents or entire chart may be attached

### Point-and-Click Chart Entry

- Quickly capture and generate chart notes with pre-defined and custom user defined clinical templates
- Review chart notes, allergies, medications, procedures, diagnosis and more in one easy to navigate screen
