

Let Infolab help transform your lab from a cost center to a profit center.

Rethink

There is no way to put a value on quality test results and the knowledge of a good laboratorian. It has become more apparent over recent years that the laboratory isn't the place to pinch pennies. Simply stated, investing in lab automation improves productivity, allows more testing to be completed in house, and can drastically increase revenue.

Develop

Managed care, increased government regulations and a higher patient load are just a few of the changes that have taken place over the past decade that has forced the laboratory to develop improved technology. Many labs have had to turn to outsourcing to handle the increased volume. It's time to develop a plan to retain that revenue.

Implement

The number one goal of most laboratories is to improve productivity and capacity while increasing revenue. Infolab has partnered with hundreds of laboratories to make this goal a reality. Let us help you. We've got over 38 years of experience assisting labs just like yours.
